ABSTRACT

The most recent discoveries on noetic science, space-time and quantum physics make other versions of the Earth reachable.

The opposition of well-trained agents, coming from these alternative worlds, focus on an innocent barmaid, key to the very existence of every Realities.

Between temporal investigations, noetic and initiatic quest, alternative civilizations and scientific theories, a multiple universe and a great adventure that will hold your breath from beginning to end.

An immersive storytelling presenting 3 threads as the pieces of a puzzle, gathering in a more global and surprising pattern.

PLOT

This novel creates a comprehensive and original metaphysics centered around the concepts of quantum physics and the possibilities offered by the development of human consciousness.

The nature of time, its new mechanism in the case of time travel, its reality in a multiple interconnected universe, are questioned, through a set of situations bringing a new type of paradox.

Through the civilizations in which the characters live, this story also explores the philosophical consequences of societies pushed to extremes, and their limits.

Technological improvements of these parallel civilizations are limited and serve mainly to mark the distance between our world and others.

With the research of Analyst Welmot, his confrontations with his hierarchy and his own doubts, comes the problem of the evolution of scientific theories.

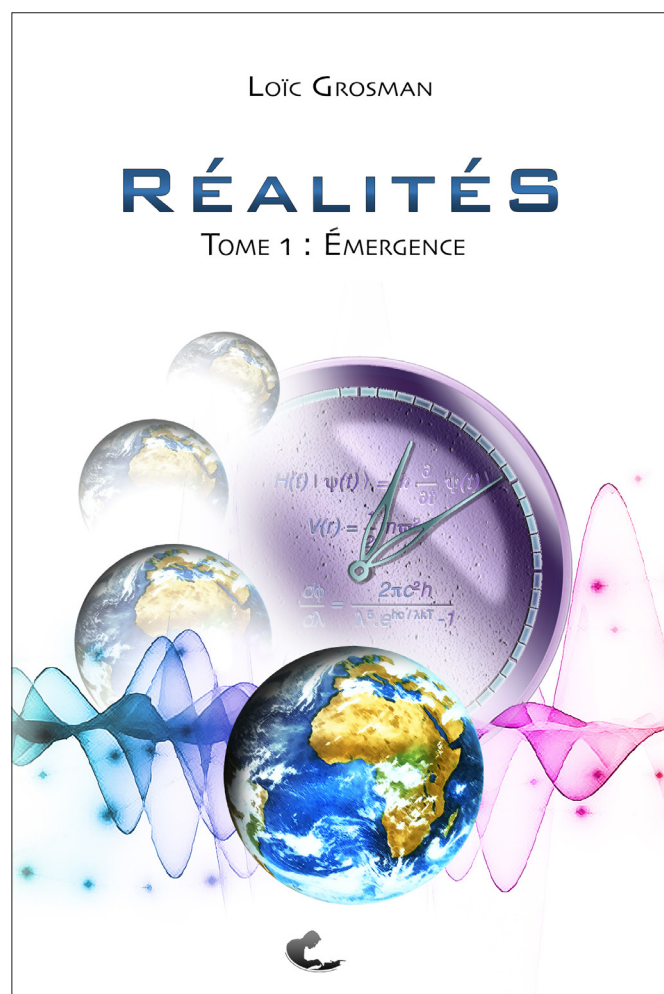

As for Abigail, she perfectly symbolizes the initiatory quest. Her way leads her by degrees to the highest realization of her essence, just as the novel gradually draws the reader into a more intense suspense and a faster rhythm.

THE K-FIELD VOL. 1 : EMERGENCE

FOURTH COVER

2012: The «Limiers» Aeria and Bron carry out a mission in Reality One for the ideal society of their Reality Zero.

Their goal ? To hunt down those who could disrupt their Reality by developing their ability to move through the worlds.

But soon, the couple notice anomalies in the quantum travel wires.

According to Analyst Welmot, this is an exceptional occurrence that would not have occurred since the setting up of the «Unique Fiber» which makes it possible to pass through the Realities.

Meanwhile, Abigail, a young waitress in a Belgian bar, is kidnapped by Kylee, a professor with talents as a hitman.

He leads him into a Reality where humanity has almost extinct in the twentieth century, and starts a teaching that undermines all his convictions.

And if these two events were in fact closely related?

The Limiers are launched into a race against the clock while Welmot is about to discover a truth that threatens to destroy the human species.

As for Abigail, what does she means to Kylee, this mysterious scientist?

This is the first part of a powerful science-fiction story that skillfully combines action, psychology and philosophy through a realistic-disturbing multiverse!

RÉALITÉS

TOME 2 : CONVERGENCE

FOURTH COVER

Aeria keeps investigating on Bron's death and discovers that the young waitress is involved.

With the help of Marcus, she begins a hunt across the K-Field, made dangerous by the presence of the killer ready to track them down.

Welmot finally completes the new theory of the Unique Fiber, which proves that an unknown Reality tries to set up an other passage through the Realities.

He will have to find the keys to this threatening world, through a multiple uchronic search never attempted before.

Abigail has benefited from Kylee's teachings and now knows how to move through time and Realities.

She returns home and must very quickly use her new faculties to get out of the traps set by the Agents of Zero Reality, already launched after her.

Mysteries are growing around the new noetician girl: who are these Agents who seek to kill her?

And the other Abigail, in London? And Kylee, what does he really want from her?

An action that speeds up and sees the Agents of Realities converging to the most dangerous battles.

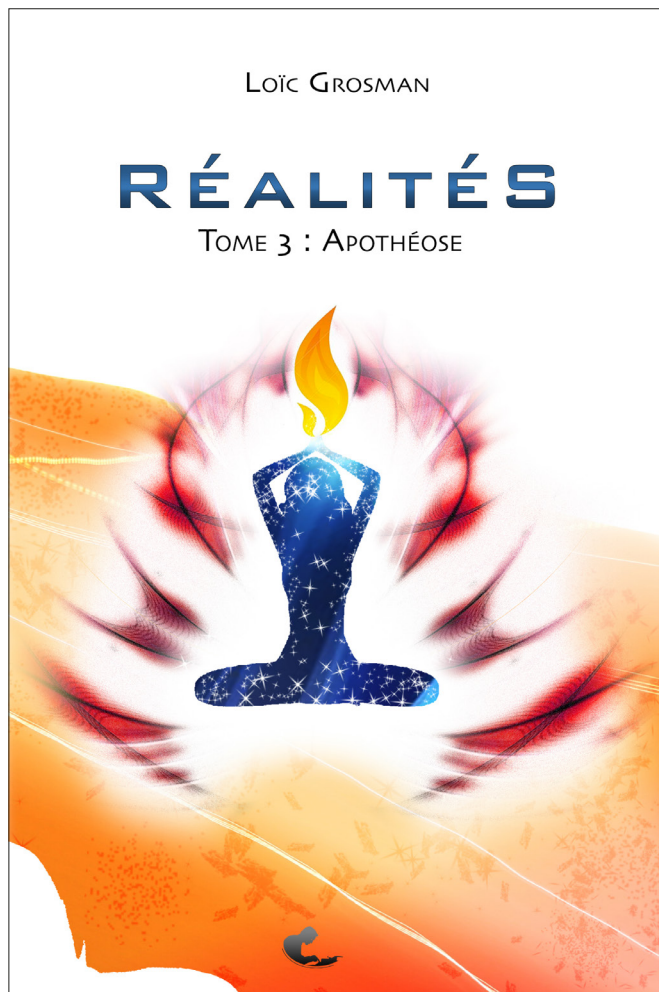

With this second part, the plot takes on a new dimension and leads faster, further, stronger in the multiple worlds of the K-Field.

THE K-FIELD VOL. 3 : APOTHEOSIS

FOURTH COVER

After a chase through the K-Universe, the Agents of Reality Zero Aeria and Marcus managed to trapped Abigail in a London bar and definitely stopped her escape.

At least they think so... Until, shortly after the Obliteration, Marcus notices Aeria's disappearance.

Analyst Welmot sends Lizzie to rescue the Limier, probably trapped in a time paradox.

With the help of his uchronic research teams he also finds the keys to get to the missing Reality and sends Marcus there for a spy mission.

Kylee, the Agent from this Reality, keeps on protecting Abigail and prevents the dangers that threaten her as she gets understanding who she is.

The forces are focused on the area of space-time where the Unique Fiber was created, and no one can predict what disasters could trigger Abigail.

Will she finally understand the causes of her existence before it's too late?

The K-Field is in danger of disappearing. Will the human species survive to that end?

Explosive fights around the Single Fiber, depth exploration of the ideologies of Realities, achievement of human potential: in this last part, the clash of the Agents promises to be unavoidable, blowing and more than ever dangerous for the very future of all Realities.

Loïc Grosman - SF Author

BIOGRAPHY

Loïc Grosman is a French author born in Paris in 1971, father of two children. He currently lives in Finistère, Brittany (29).

His professional life is governed entirely by his passions. First a computer scientist for more than 20 years, a profession that brings him rigor and ironclad pugnacity, he becomes a photographer; a job that allows him to exercise his artistic fibre.

Self-taught, obsessive by nature, thirsty for knowledge, he finds interest in all fields: from philosophy to fundamental physics, from economics to sociology, from humour to everyday life.

He is also an insatiable reader, eager for scriptwriting surprises, great ideas and beautiful sentences. He reads both philosophical

essays and novels, and all genres suit him.

However, his preferences go to the imaginary literature: since childhood he falls into science fiction, of which he avidly reads the greatest novels, the greatest authors. Fascinated by the ability to move people with words, he jumps into the mystery of writing, after seven years of personal study, intense reflection and assiduous practice.

His scientific spirit, his pronounced taste for abstraction and the discovery of the theories of quantum mechanics provide him with the breeding ground for an inspiration that he himself describes as mysterious.

The result is this first novel, «Réalités» (The K-Field), a counter-utopic science fiction trilogy; a kind of realistic, dense, deep and rhythmic sci-fi story.

He has also published a romantic comedy and is starting a SF series for young people.
